-

Hello. Being a long time gaim user (we use jabber) for the recent week gaim stopped working on my SuSE 10.1

- 1) I launch gaim, give keyring password;
- 2) a login dialogue box appear, ask me the password for my account, the "login" button is gray, meaning it's not clickable.

If I open account config dialogue, the checkbox for 'online' for my account is not clickable (click has no effect), if I create another account, the same thing happen, I still cannot login.

I also tried to remove ~/.gaim

I also tried to login as another user, same problem.

I also tried to uninstall gaim, install it (with yast), same problem.

Now I am using kopete. Did anyone experienced similiar trouble?
