You can try Mozilla Thunderbird. I'm using it for quite a while now with large volume of mail everyday and it doesn't give any problems. The main problem with that when compared to MS Outlook I see is I'm not able to set reminders & follow-ups for mails.

Hi All,

One of the things that have prevented me from moving from windows to Linux is having the email client, evolution crash all the time with the volume of email I have.

My total email volume is about 800–1000 emails per day, most of them from lists and are directed to folders. After I have about 2 thousand or so emails Evolution starts behaving badly, in it crashes and freezes. Well the last time I tried to migrate about 2 years ago it did. I have a total of 4.9Gin Outlook public folders, which i will want to convert across.

Can anyone reccomend a good GUI email client which will be sturdy enough to cope with high volumes of email, and has the ability to cope with automatic rules for forwarding the mail.

I have purchased a copy of Crossover office pro to allow for me to run outlook if necessary, but would rather not have to use that.

Cheers for now, and thanks in advance,

Shane B
