I looked at the suggestions for improvements at the open suse site and noticed that there is no request for the ability to write to partitions formatted for Windows. Have I missed something, or is that something that will likely not appear in Linux for the fore-guessable future?

AFAIK, there's no official plan to do this. There are unofficial projects which allow for ntfs writing but they are not officially sanctioned.

Keep in mind that Windows NT 6 – code name vista – has the same 3.1 driver as in the current versions of NT but may be updated when they eventually release the winFS subsystem.

I've heard decent things about NTFSMount...

<http://www.linux-ntfs.org/>

..YMMV, however. :)

Listen, strange women lyin' in ponds distributin' swords is no basis for a system of government. Supreme executive power derives from a mandate from the masses, not from some farcical aquatic ceremony.
