Hey all,

I'm sure someone has asked this before but I just installed 10.2 on a machine here and only Banshee and like one other media player can seem to do MP3s, XMMS doesn't play them. Are there media packs I can download? I started YOU and it says there aren't any updates to install which I thought was a little weird, so I'm checking here to see if thereis maybe a problem with something I have to do after install for updates.

And of course to see what I need to do for MP3 playback on XMMS.

=====

Since 10.2 is still in the Alpha stages, there will be no other files available at the moment. What you can do, should do is grab the source file rpms, adjust the spec file for xmms and recompile it with mp3 playback enabled. Banshee is probably using the Helix backend from RealPlayer. Any other files you feel you need will require you compiling those yourself or you can wait for the release of 10.2!

10.2?

regards,
Lee
