Some phones use "OBEX" transfers. obexftp might be your friend here.

Thanks for this pointer; the obex homepage lists the 6230 phone as supported. I'll try it out later tonight.

Some USB things might provide USB Mass Storage, just like any USB stick.

I tried that, but no block device is established.

In the meantime, I learned that `cdc_acm` (via `/dev/ttyACM*`) establishes a serial AT device over USB and that `gnokii` supports that as well. I'll have to give that a try, too.

But full functionality might need an unsupported kernel module `nokia_dku2`, that got thrown out of the official kernel tree by Greg KH last year. Sadly, his throw-out message was not too informative ("`causes problems and is the wrong way to implement anyhow").

I'll keep the list posted on further results; as others might have the same phone and might want to access it as well.

Joachim
