davidr wrote:

The opensuseupdater icon always shows a yellow triangle, hovering over the icon reports

error :
helper program returned
setuid operation not permitted
forget to chmod this program?

anyone any idea as to how to fix this?

At least the error message is very helpful. :-) You have chosen secure for your security model instead of easy, which changes the permissions of /usr/sbin/zypp-checkpatches-wrapper. You need to add "/usr/sbin/zypp-checkpatches-wrapper root.root 4755" to your /etc/permissions.local file (make sure you end this line with an enter, i.e new line). Then run SuSEconfig. This makes the fix permanent, otherwise the perms would be reset by SuSEconfig.
