Hi List

I have been trying to get my OpenSuSE 10.2 Retail Client to accept remote logs from mail server.

I have configured the mail servers and amended the iptables rules to suit.

I run `netstat -a | egrep syslog` and I get the following below on the mail server ::

```
[chuck@mail1-server logalizer]# netstat -a | egrep syslog
udp 0 0 *:syslog I have looked at /etc/sysconfig/syslog and I cant get this to work with
SYSLOGD_PARAMS="-r -s mydomain.com"
```

No go with `/etc/syslog-ng/syslog-ng.conf` either.

```
#
# include internal syslog-ng messages
# note: the internal() source is required!
#
internal();

#
# the following line will be replaced by the
# socket list generated by SuSEconfig using
# variables from /etc/sysconfig/syslog:
#
unix-dgram("/dev/log");

#
# uncomment to process log messages from network:
#
#udp(ip("0.0.0.0") port(514));
udp(ip("192.168.0.*") port(514));
};
```

Any ideas

Cheers
