Okay,

So I saw that I can update my kernel and I figured, sure, why not.  
2.6.21-rc5-git2-31-default is what I have.

My guess is that something SUSE includes in the stable version isn't included in this branch. I couldn't even find that version on the kernel mailing list. Here's the closest I found...

<http://www.kernel.org/pub/linux/kernel/v2.6/testing/ChangeLog-2.6.21-rc5>

...I'm curious what the git2 means.

I'd suggest "downgrading" to a stable version.
