Using SLED 10 I can activate dual head mode, but the only option available to me it "cloned multihead" mode --

both "xinerama multihead" and resolution settings are "greyed out" and unavailable.

What might be the cause of this?

My device is a fairly generic "white box" notebook clone, with an intel 855 GM primary display. I have connected it to a Proview pl866s lcd. That seems to display fine, but again, it is stuck in clone mode and only 800x600 resolution.

Suggestions would be welcome

Peter
