Onward! The only thing I notice with the laptop is the SD/MMC/SM/XD card reader on the front. It isn't enabled for some reason.

That's pretty odd, 10.2 found my card reader (Dell 9400) and it all works except XD cards. SD and all the rest work, but XD just sits there. If I kill off hal I can mount an XD card manually (as root).

Of course this was not a major issue till I got a Olympus camera that uses ---- you guessed it, and XD card.
