The problem is that "local.net" does exist. You are appending that "local.net" to all your searches for non existing domains, thus the result you get. Look at your "/etc/resolv.conf" file.

Hmm, well, i used that domain on my lan before i get internet at home :S Changed it to my ISPs domain, is there any command to flush the cache?, well, waited some minutes and the problem seems to be gone!, thanks!

Change to a domain that has no chance of existing at all, like "portatil.estaesmicasa" in the resolv file. Don't use a .net or anything of the sort with 2/3 letters that have a chance of existing. Change the name of your portable, too.

Notice that what you put in the resolv file will be appended to non found sites...

Cheers,
Carlos E. R.
