i always have bad experience with my proftp server. i have it running but i can't transfr any data. Everytime it always stuck at "Entering passive mode" for a long time and then timeout. But if I disable the firewall, it works well. So which port of firewall should i open? I do some googling and find out port 30000–30050 or 60000–65535, but it didn't work.
