-

Hello all,

We have finally removed the older OpenOffice.org project in the Build Service. It has been obsoleted by the three new projects:

OpenOffice.org:STABLE
OpenOffice.org:UNSTABLE
OpenOffice.org:EXTRAS

OpenOffice.org:STABLE

This project provides packages from the latest stable version of OpenOffice.org office suite. It is OOo-2.2.1 these days.

OpenOffice.org:UNSTABLE

This project should provide packages from the latest development build. It is currently built from the same sources as the 'OpenOffice_org' package in 'openSUSE:Factory'.

OpenOffice.org:EXTRAS

This project provides some extras for OpenOffice.org office suite, like dictionaries and templates. They should be usable with both the STABLE and the UNSTABLE OOo packages.

I am looking for co-maintainers that could help me to keep the stuff up to date, improve it...

The packages are currently available for the following products and architectures:

SLED10-i386

10.0-i386

10.1-i386

10.2-i386

10.1-x86_64

10.2-x86_64

The installation repositories can be found at

<http://download.opensuse.org/repositories/OpenOffice.org:/STABLE/>
<http://download.opensuse.org/repositories/OpenOffice.org:/UNSTABLE/>
<http://download.opensuse.org/repositories/OpenOffice.org:/EXTRAS/>

FAQ:

Q: Where can I ask questions regarding OOo?

A: I am sorry, even if I find more time for you, I can't answer everything. I would sort the questions into the following categories:

- + general questions about OOo (about a functionality) should be best answered by the OOo community on users@xxxxxxxxxxxxxxxx
- + bugs should be reported into bugzilla, see below
- + other questions about our plans, Novell features, ... should be send to this list. Please mention "OpenOffice.org or OOo somewhere in the Subject. I promise, I'll take more care of this list and answer OOo-related questions at least once or twice a week. If I don't, feel free to CC me ;-)

Q: How to report bugs?

A: Please, report bugs at <https://bugzilla.novell.com> for the product "OpenOffice.org 2.0".

Please, do not forget to mention:

- + that the package is from the Build Service
- + system you are running, e.g. "openSUSE-10.2-x86_64"
- + desktop you are using, e.g. KDE, GNOME
- + OOo version from the last line of the dialog "Help/About OpenOffice.org",
e.g. "Build 2.2.0.1"
- + that you are running 32-bit OOo on x86_64 system if this is the case
- + steps to reproduce
- + other useful details (e.g. screenshots, backtrace, strace)

It will help us a lot and it will increase the chance that the bug will be fixed.

Best Regards,

Petr Mladek
software developer
