Hi all,

Does the "Intel Next-gen Wireless-n 802.11a/b/g/n Mini Card" in the new Notebooks from e.g. Asus & Dell's Inspiron 1720 / 1721 work with OpenSUSE 10.2?

Dunno.

<http://support.intel.com/support/notebook/sb/CS-006408.htm>

Check there.

Thanx Kai,

Pardon, I meant OpenSUSE 10.2. (Changed the Subject too)

I can't judge if this card works or not (I'm not that knowledgeable on this technology). I am about to order some notebooks for the company. They have to be able to run Linux. They can be ordered with either Intel Pro Wireless 3945 802.11a/b/g-Minocard or the Intel Wireless-N-Minocard Next Gen. The new N-Minocard would be nice, if it works.

But it seems that something is in the coming. I googled some more and found this:
