- 

I don't know what happens, but now, when I start the system, I have lost all icons (I can see the task bar, but no visible buttons, as for example the K Menu). Same phenomenon when I use an application (KMail), the buttons from the toolbar are not visible. When I start a terminal, the fonts in terminal are distorted, but not the fonts which are displayed in the window border. I have not updated my system, nor installed something else, all happens suddenly with no apparent reason.

— Can you give some suggestions ?

Bogdan Cristea
