Has anyone spun a package of the new claws-mail version?

I tried to spin one myself based on this spec file  
<http://svn.rpmforge.net/svn/trunk/rpms/claws-mail/claws-mail.spec>  
which I think is more fedora-centric because I found it over at  
<http://dries.ulyssis.org/rpm/packages/claws-mail/info.html> and I  
changed some things like openldap-devel to openldap2-devel. I still  
can't seem to work my way out of dependency hell though, bzip2-devel  
and compface-devel packages for opensuse 10.2 don't seem to exist, for  
example. Though I managed to come up with some of the other deps  
myself.

Anyone already done this?
