I believe it is enabled by default.

no, and ~/.Xmodmap is not there unless you generate it yourself (since 10.1 or earlier ??).

Maybe; my system was upgraded from 8 something, over the years. I could have inherited that file, maybe I copied it over.

from `cl "xmodmap"` will show present key assignments,

```
wahoo:~ > xmodmap -pk |grep -i compose
[no output]
```

Not important: I get the same result, and I do have the compose key. The string only appears in the comments. The real test is to try to compose a char.
