Hi,

Tamas Sarga wrote:

I tried to update Firefox from the Mozilla repository. With Updater Applet it resulted:  
Installation of [S3:1][package]MozillaFirefox-2.0.0.12-6.1.i586 failed:  
(with --nodeps --force) Error: Subprocess failed. Error: RPM failed:  
Usage: usr/bin/update-mime-database [-hvV] MIME-DIR  
No directories in update-desktop-database search path could be processed and updated.  
error: %postun(MozillaFirefox-2.0.0.12-5.1.i586) scriptlet failed, exit status 1 (with --nodeps --force) Error

With online update it resulted:  
Subprocess failed. Error: RPM failed: Usage:  
usr/bin/update-mime-database [-hvV] MIME-DIR  
No directories in update-desktop-database search path could be processed and updated.  
error: %postun(MozillaFirefox-2.0.0.12-5.1.i586) scriptlet failed, exit status 1

yes, sorry. There was a typo in the postuninstall script.  
Have you got the new version installed correctly?

rpm -q MozillaFirefox ?

If you still have the old version around, remove it manually with rpm -e --noscripts and then you can install the new one.

Wolfgang
