Hi,

I tried to upgrade my openSUSE 10.3 into 11.0 factory but it seems to stop in the first step.

In order to install this package, you must agree to terms of the above license. Continue? [yes/NO]: y

Downloading package man-pages-2.68-23.noarch, 4.1 M (3.8 M unpacked)

\* Downloading: man-pages-2.68-23.noarch.rpm [done (4.9 K/s)]

\* Installing: man-pages-2.68-23

Installation of man-pages-2.68-23 failed:

(with --nodeps --force) Error: Subprocess failed. Error: RPM failed:

error: unpacking of archive failed: cpio: Bad magic

I found the suggestion here :

<http://www.suseforums.net/index.php?showtopic=48136&pid=237513&mode=threaded&show=&st=0&#entry>

but I don't know how to updated the rpm and rpmdelta packages via YaSTs Software Management because the preparation of upgrade has removed yast (typing yast and yast2 produce "command not found")

You need to upgrade to factory rpm-4.4.2-182.i586.rpm or above.

zypper in rpm before the zypper dup. I've filed a bug report already about incorrect dependencies. They have changed the rpm compression format.

Dave
