I have set up a few systems with 10.3 as Samba Servers.

I have AFAIK activated VNC Server and opened the Firewall ports.

I have also set the Router to redirect Ports 5800 and 5900.

Still I can't get a connection,
What am I missing, and what is the preferred client for the
Built in
VNC...? Windows XP Client tried TightVNC and RealVNC..

I've had a bit of an issue with this as well. Seems really difficult under openSUSE.

I finally got a connection tonight using both openSUSE systems...

http://www.perfectreign.com/stuff/2008/20080615_vnc_success.jpg

...it wouldn't connect – even with all firewalls open and a password set – until I'd clicked "allow connection" on the remote side.

This is odd, since I often connect to one or more openSUSE computers at work from Vista.

http://www.perfectreign.com/stuff/2008/vmware_xp_remote_suse_1680x1050.jpg

(That's actually me using VMWare to run XP, which is connecting to my Vista machine at work via RDP and then connecting to my openSUSE desktop via VNC.)

Re: [opensuse] VNC Client

I've not used VNC in awhile – FreeNX allows a graphical login over SSH2
– more secure than VNC, and in my experience, much faster. Plus, it's
–alot– easier to setup and manage.

The FreeNX server may already be installed on your system; you can use
the nomachine.org's free clients to connect to your server..

Have you tried opening and forwarding port 5901.

I have it working for some time now, and that was the only port needed to be
opened/forwarded.

Paul
