Listmates:

For some reason unexplained, after the most recent round of updates, I am now asked to confirm each file deletion or each overwrite of a file. What setting does this and why did it change during the last round of updates? (/etc/bashrc? /etc/profile?)

It also may be the result of downgrading the kernel from Jan's latest that always includes hxttools. Any help would be appreciated. Having to answer 'y' all the time is a pain...
