Hi all, has anyone here tried to install and use AIM for linux from the AOL site? I use gaim right now and really love it, but I cant stand the no file transfer feature. I know that its supposed to be in Gaim 2.0, but I just wanna see if anyone has used the AOL version to do file transfers in the mean time..? Thanks
Charles

You can try wine. You can also try install gaim 2.0 from source. Your other option is to install kopete.

Kopete doesn't do file transfers to/from AOL.

James

Don't worry about people stealing your ideas. If your ideas are any good, you'll have to ram them down people's throats.
