On Friday 30 June 2006 07:58, Kipton Moravec wrote:

/etc/apt/sources.list is not there. On mine I found the following file at
/etc/apt/sources.list.d/sources.list. Is that the problem?

That is different than mine, but I installed fresh, not upgraded. On mine the directory is there, but empty and sources.list is in etc/apt as one traditionally expects. The version of apt used by Dapper added this directory:

<http://bugs.debian.org/cgi-bin/bugreport.cgi?bug=66325>

I don't think this is a problem, but am not certain. It seemed to me from your original message that you are getting some updates, just not these particular ones. If that's the case, then the location of the file is definitely not an issue. If you've never gotten any updates since you upgraded, then maybe this is a problem.

```

deb http://archive.ubuntu.com/ubuntu/ dapper universe main restricted
multiverse deb-src http://archive.ubuntu.com/ubuntu/ dapper universe

deb http://security.ubuntu.com/ubuntu/ dapper-security main restricted
universe deb-src http://security.ubuntu.com/ubuntu/ dapper-security main
restricted
```

Re: Packages have been kept back -- What to do?

Did these get wrapped strangely after you sent them or are they this way in the file? Each line should start `deb http://...` or `deb-src http://...`

```
# deb cdrom:[Ubuntu 5.10 _Breezy Badger_ - Release i386 (20051012)]/ breezy
main restricted deb http://archive.ubuntu.com/ubuntu/ dapper-updates main
restricted universe
```

Same question here.

The archive points to a different server, and there are more qualifiers. Do I need to comment out my lines and change them to what you have? Why would it be different and in a different place? Did you modify your lines from what came with the package?

What I showed you is what was installed. The only changes I made were to remove comment '#' to enable the extended repositories. The server names are locale dependent, so I think that is unlikely to be an issue.

```
Next step look in the /var/log/dpkg.log
2006-06-10 16:44:14 install gdk-imlib1 <none> 1.9.14-29ubuntu1
2006-06-10 16:44:14 status half-installed gdk-imlib1 1.9.14-29ubuntu1
2006-06-10 16:44:14 status unpacked gdk-imlib1 1.9.14-29ubuntu1
2006-06-10 16:44:14 status unpacked gdk-imlib1 1.9.14-29ubuntu1

2006-06-10 17:34:28 status unpacked gdk-imlib1 1.9.14-29ubuntu1
2006-06-10 17:34:28 status half-configured gdk-imlib1 1.9.14-29ubuntu1
2006-06-10 17:34:28 status installed gdk-imlib1 1.9.14-29ubuntu1
```

I just noticed it is looking for `gdk-imlib1` and `gdk-imlib11` was installed. There are no other lines in the file with just `gdk-imlib1`.

In Dapper, `gdk-imlib1` is a compatibility package for `gdk-imlib11` and isn't actually used any more:

<http://packages.ubuntu.com/dapper/oldlibs/gdk-imlib1>

`libkrb5-17-heimdal` string is in the file at all.
`libopenal0` string is not in the file either.

```
Searching for moagg
2006-06-10 17:00:46 upgrade moaggetit 0.5-1build1 0.5-2
2006-06-10 17:00:46 status half-configured moaggetit 0.5-1build1
2006-06-10 17:00:46 status unpacked moaggetit 0.5-1build1
2006-06-10 17:00:46 status half-installed moaggetit 0.5-1build1
```

Re: Packages have been kept back -- What to do?

Re: Packages have been kept back -- What to do?

2006-06-10 17:00:46 status half-installed moaggedit 0.5-1build1
2006-06-10 17:00:46 status unpacked moaggedit 0.5-2
2006-06-10 17:00:46 status unpacked moaggedit 0.5-2

2006-06-10 17:37:19 status unpacked moaggedit 0.5-2
2006-06-10 17:37:19 status unpacked moaggedit 0.5-2
2006-06-10 17:37:19 status half-configured moaggedit 0.5-2
2006-06-10 17:37:19 status installed moaggedit 0.5-2

So I am guessing it found moaggedit not moagg

I searched for the word "error" and there are no cases other than part of a package name.

It looks to me like apt is unable to find the updated packages.

If the questions I had above about line wrapping were not the result your sources.list file getting corrupted in transmission, then I'd fix those, su apt-get update, and then try to upgrade again.

If the questions I had above about line wrapping were the result your sources.list file getting corrupted in transmission, then what I would suggest doing is trying to install the four packages (e.g. su apt-get install ...).

One other thought, you can probably remove the one compatibility package (be careful if you try this). First try su apt-get -s remove gdk-implib1. Note the -s. This makes it a simulation. Pay close attention to what it says it would do. If it says it will only remove the 1 package, then it ought to be safe. If it says it is going to remove several packages, then don't do it again for real.

If none of that helps, I probably ought to let someone who upgraded give you a hand.
