The command `lspci` will give a list of PCI devices in your system, which is probably good enough.

In your case, the problem seems to have been related to the boot loader (triggered by the other installation), but it's just a finger in the air kind of guess.

Hervé.

nOT SURE WHAT MAKE/MODEL MY MOTHERBOARD IS; IS THERE A WAY IN
uBUNTU TO
FIGURE THAT OUT? i FINALLY DID GET MY uBUNTU TO WORK AGAIN BY
REINSTALLING IT. i'M THINKING THERE'S SOME PROBLEM WITH THE OTHER os,
BECAUSE THE REINSTALL OF uBUNTU HAS FIXED THE KERNEL PANIC ISSUE
AT
LEAST FOR BOOTING TO uBUNTU, AND THE ISSUE DIDN'T EVEN COME UP
UNTIL i
TRIED TO INSTALL THAT OTHER os ON THE OTHER DRIVE.
