Hi,

I switched last week to a DELL Inspiron 9400 with ATI Mobility Radeon X1400 graphics card. On my previous system I was also running Feisty Fawn and so I reinstalled Feisty using the exact same repos and packages. I use the server-xorg-fglrx driver, since the ati driver does not work with this card.

The switch went OK but now I have a problem with code development in a graphic program I make. It ran fine on the old PC but on the new PC I have lots of following errors which make my application crash.

W: X Error: BadValue (integer parameter out of range for operation) 2
Extension: 156 (RENDER)
Minor opcode: 5 (RenderChangePicture)
Resource id: 0x2e0029
W: X Error: BadValue (integer parameter out of range for operation) 2
Major opcode: 18 (X_ChangeProperty)
Resource id: 0x3
W: X Error: BadRequest (invalid request code or no such operation) 1
Major opcode: 0 ()
Resource id: 0x3

I cannot find anything on the web, so has anyone an idea.
