Hi!

I have an easy question for you... :)

Well, I've just acquired one P4VM900-SATA2 main board for my computer @ home and wonder if it works with Ubuntu. I've checked the website from ASRock and also some other specialized web sites (<http://www.viaarena.com>) and the driver for Linux is still no available.

Could you help me?

Thank you in advance!

Jordi

Just Install it, you wont need extra info.

I installed 9 machines last month.
