|
| According to the INSTALL file, you need libgd2-dev but it isn't available
| for Gutsy. If you search for libgd2 with synaptic you can find
| libgd2-xpm-dev which might work instead.

hi, well I think im getting closer here, thanks for the tip. but, now
its looking for vloopback kernel module, and says its not available. I
think thats what gets installed when your suppose to run the "sudo make
install" that fails. but..., all is not lost, I see there is an email in
the readme file, I think Im going to fire something off to the developer
to see if we can figure this out. What do you think Daniel, can you
help us out on this one? Thank you.

```
steve@smil3y:~/Desktop/dv2vloopback$ sudo ./dv2vloopback /dev/video0
352x288x24 25
FATAL: Module vloopback not found.
Found AV/C device with GUID 0x0080880308e00470
