Oh and John, Kwifimanger couldn't find the card either.

You mentioned you installed from an alternate CD originally, Why?

How difficult would it be to reinstall on that partition? I know it's a last option and all. I'm not sure how mission critical this laptop working properly is to you, but it might be worth it to reinstall fresh from another CD (carefully burned at a slower speed and verified no errors). This way you can either confirm or rule out it's an issue with hardy and your wireless card.

I use the alternate CD out of habit, it wasn't necessary in this case. We've been working with older boxes we recycle and found the alternate cd more reliable for installations with lesser capacity. It also allows us to use the OEM feature on the alternate cd. I burned at minimum speed and used the check disk feature.

I'm leery of re-installing because this is a dual boot with vista and is mission critical. I can connect hardwire and if I must go wireless I can go to the other side, That's why I know that is something with Hardy. Using the same hardware and access I'm able to connect with MS and with 7.1

Bob

Re: 8.04 Wireless Problem (still)

I wonder if this might be related:

<https://bugs.launchpad.net/ubuntu/+source/linux/+bug/196285>

[Regression] Realtek RTL-8185 Wifi not recognized in Hardy 8.04 Alpha 5

You might have a look through some of these to see if you can spot another related bug:

<<https://bugs.launchpad.net/ubuntu/+bugs?field.searchtext=RealTek+wireless&orderby=-importance&search=Search>>

<<https://bugs.launchpad.net/ubuntu/+bugs?field.searchtext=RealTek+Gateway&orderby=-importance&search=Search>>

<<https://bugs.launchpad.net/ubuntu/+bugs?field.searchtext=Gateway+wireless&orderby=-importance&search=Search>>
