When looking around on the
web, I've seen a few sites
where they mention

the

"other" rename, but no one
seems to use it very much.
One person even
mentioned it as "pretty
useless" or something like
that. It's

It's certainly less powerful than prename. All
it does is simple string
substitution with no regex wildcards.
(However, I should point out,
this 'pretty useless' is exactly what you're

Re: The rename command&
doing here)

This forever repeated Re:The rename Command... is a
Summer waste
time email. From the very beginning of Linux the Windows
users had to
learn that rename is not part of the commands. We used
"mv" and it has
worked for all this time. It still does.

If you refer to me, I'm sorry to waste your summer. I only ask questions
because I want to learn.
When first starting to use computers, if we do not count the very first
years with a Swedish computer (Luxor ABC80) with a Basic interpreter and
the
operati
