Hi James,

<snip>

Are you sure your ISP doesn't have DHCP? Do you connect to the Internet through a modem?

</snip>

I am 100% sure that my ISP does not have DHCP. I use the same connection and the notebook on windows, there I have set everything manually and that connection works fine, I am able to do everything on windows. But, when I boot my machine in Ubuntu, it's not working... :(

<snip>

can you post the output of
cat /etc/network/interfaces

also attach the file created in your home directory by:

```
sudo lspci -vvnn > lspci-vvnn.log
```

</snip>

Right now I am at office. Will try your suggestions and answer your questions in the evening once I reach home (I am from India).

Thanks a lot for the quick reply.

regards,

abhishek

1. Ethernet is not working. My ISP does not have DHCP. After setting IP address, subnet mask, gateway, DNS, it shows that the LAN is connected, I can see the packets being sent/received, but I cannot open any web page neither I can ping any IP. I have tried almost everything mentioned on the forum "Ubuntu 8.04 Hardy and HP 6720s (a hopefully complete

Re: help needed for Ubuntu 8.04 on HP 6720s notebook

guide)" and other too to make my Ethernet work, but none of them worked. And because the Ethernet is not working I am not able to do "aptget" for anything.

Better question, do you know exactly how you connect to the Internet and if so how?

can you post the output of
cat /etc/network/interfaces

also attach the file created in your home directory by:
sudo lspci -vvn > lspci-vvnn.log

When you do get on the Internet you would probably prefer to use a graphical package manager. But if you'd like to use the shell you'll want to type:
apt-get install <package-name>
