The keyboard doesn't work at all, i tried to play with BIOS settings but it doesn't help.

Bad keyboard? Wouldn't be the first time. Did you try moving the wireless usb adaptor around to different usb ports? If the keyboard doesn't work in bios – that is, when you boot and go into bios does the keyboard work?

and it doesn't
work. Mouse work properly, but keyboard i can't get work.

By "i can't get work" do you mean:

- a. The keys don't work at login
- b. The keys work at login but don't work afterwards
- c. The keyboard doesn't work at all

Please provide some added detail so that others know what you need help with. Hints for USB keyboards & mice; try them on different USB ports (preferably the back USB ports if you are using a desktop machine), also check your bios for USB legacy support – if its on, try with it off & if it's off, try with it on.
