hi Guys!

I am looking for some good Linux distro, with support for X-Desktop environment
the target system is an old Intel-P2 with 32Mb Ram and 1.2Gb Hard disk,
I intend to use this system for basic websurfing, reading PDF along
with K-Office or similar for wordprocessing and spreadsheet
applications using X-Environment.

any suggestions??

Have a look at the list:

http://www.linuxlinks.com/Distributions/Mini_Distributions/

This question is being asked in the newsgroups every other week. Others will recommend a very particular lightweight distribution primarily due to (narrow) personal experience. Use your judgement to assess the above. Also see:

<http://www.zegeniestudios.net/ldc/>

Hope it helps,

Roy
