IT IS A MERCURY POCKET DV 4 IN 1

suse knows this and correctly lists it in usb devices

it also has listed the scanner and the usb flashdisk drive (which i wasnt expecting!)

> *How have you set up your system to accomodate the camera?*

i have done nothing other than look into th edevices manager , yast2

> *What have you done to access the camera?*

tried to find it in multimedia sub menus where there are no camera programs,

i have looked into adding software (from the 7 cd's) via the yast software icons

hope this helps but i am purely a gui linux user, any attempts i have made to write or change scripts has never worked!, they didnt

alt.os.linux.suse: Re: help to run usb camera

save is my guess on that

cheers andrew
