With a 9.1 client, the nfs-shared utf8 encoded filesystem works perfectly.

But I'm not ready to upgrade my 9.0 box now (too much customisation, and it works perfectly).

Anyway, thanks for the pointer. While reading this list, it seems that I18N and filenames is a complex problem...(maybe not fully solved yet).

Thanks again,

fabrice

ps: anybody knows if nfs in suse91 is V3 or V4 ?
