I've been reading all the FAQ's I can find and I'm stuck with this one, anyone any clues or pointers?

With Cups – I can print from kword, OpenOffice – but trying to print a webpage from konqueror or a mail from kmail fails as shown by the log snippet–

I've drawn a blank with finding the cause – and its the ONLY fault I hae with Suse – If I'd known it was this smooth i'd have migrated from MDK years ago.

Ta in advance

a
