I deleted Open Office and did a reinstall. Everything is fine except it displays in 640/480 and my screen is set to 1124/980 (or whatever the 1100x setting is). Which config file covers the display size of Open Office?

I would not mind the larger display, except when it opens a screen for recovery of a document, which it does much too often IMHO, the "accept reject" buttons are out of the viewing area.

Deb
