Hello (sorry I don't have a perfect english but I'm french)

I have a problem with the installation of mandriva (2005) and suse (9.3)on my pc

My motherboard is a p4p800 e deluxe and I try to install linux on a hard disk (ide) which is connected on the promise controller (pdc20378) and there is all time the same error (irq 18) so this installation freeze and i only can reboot my pc , the installation isn't possible

Please help me if you know a solution for my problem (I'm a beginner an I haven't found anything which could help me)

The french's forums haven't help me

Thank's
