I'm running a dual boot with Windows XP and SUSE Linux 10.1
I replaced my system Nvidia video card with an ATI video card.
Now when I try to boot to Linux I get a command line prompt and no GUI.

Not sure what to do next.

Any information or direction as to how or where I should look to resolve this issue would be greatly appreciated.

Thx

Copy /etc/X11/xorg.conf.install to /etc/X11/xorg.conf
and reboot.

But why changing from nvidia to ATI ? I did the other way :-)
