Hello,

I am having a problem with my internet connection on Suse Ent. 8. Yast detects my network card and configures it fine, but I dont know how to configure dhcp.

Under windows, i just plug in the cable and it automatically detects the network and i can connect to the internet. I dont know how to do it in Suse, i always used a modem (proxies).

I got the default gateway by doing ipconfig on windows cmd. Our IT do not provide support for Linux/Unix platforms,

Please help.

.
