My 10.3 system has OOo v 2.4.1.5, with some problems, notably locking up in Calc and not recognizing the keyboard – there is an unresolved bug report on the OOo portion of bugzilla on this.

11.0 has OOo v 2.4.0.14. Presumably this is before the updates on 10.3 that caused the problems, but will they soon update it and bring the problems back? Right now, OOo in 11.0 seems to work without the problem.

John
