[RH distro info]

Thank you so much for the info. I was on FC a few minutes ago which hanged and only the mouse could move. Ideally, in Windows, one can just press Ctrl, Alt, Del and choose to end the "Not Responding" task. What would be the equivalent in Linux(any flavour).

Nope, in >99,99% the kernel is still running fine, just X hogged the display. Try switching to VT first "[CTRL][ALT][F1-F6]" which should give you a VT to login, may take a few seconds. If the keyboard is stuck, try to login via ssh from another system and clear the mess. Another idea would be to enable "magic sysrq" and use this, try a google search on the above. Or one could run anagetty on the serial port and use this from some laptop/other box to login.

Good luck

BTW

Did you checked the URL I send in another reply to this thread?
