I'm using SuSE 8.1 as server.

All was working properly this noon.  
Sometime this afternoon attempted logins from  
remote or loop back from console cause hang.

I found nothing helpful in the logs but I did run  
sshd with -d -d -d startup.

I got the following log

```
1752: debug1: sshd version OpenSSH_3.4p1
1752: debug3: Not a RSA1 key file /etc/ssh/ssh_host_rsa_key.
1752: debug1: read PEM private key done: type RSA
1752: debug1: private host key: #0 type 1 RSA
1752: debug3: Not a RSA1 key file /etc/ssh/ssh_host_dsa_key.
1752: debug1: read PEM private key done: type DSA
1752: debug1: private host key: #1 type 2 DSA
1752: Disabling protocol version 1. Could not load host key
1752: debug1: Bind to port 22 on ::.
1752: Server listening on :: port 22.
1752: debug1: Server will not fork when running in debugging mode.
1752: Connection from ::ffff:24.159.192.106 port 2484

Re: sshd failure

1753: debug3: mm\_request\_receive\_expect entering: type 21

1753: debug3: mm\_request\_receive entering

I assume it must be a corrupt file someplace, but having no luck finding it.

I can ssh from the server to another server and I can telnet to the server in questions.

Any suggestions appreciated.

Regards...Dan.

Did someone change a NIC?
