Anybody know what to look for with regard to MP3 players that can be mounted as USB mass storage devices? I'm asking as the last one I tried had some awful M\$DOS5 variant for a file system, and try as I might, I couldn't mount it read/write.

I'm thinking about low budget items here. Forward and reverse scan would be a nice feature too.

You can mount a few various generation IPODs like that. If you add in something like Rockbox, you do away with syncing completely and just rsync music to it or whatever. The iAudio models and the newer Wolverines also mount that way. I have lusted after an iAudio X5 for quite some time now. You can find wholesale deals on 5th generation ipod videos and I use a 60 and 80g model on Ubuntu where they are mounted up as mass storage.

I bet that there are whole bunches of other models that mount that way as well. Perhaps some of the Creatives?

Will follow this info up. Cheers.
