

Linux Kernal Architect Role in Andover, MA

Source: <http://linux.derkeiler.com/NewsGroups/comp.os.linux.announce/2004-05/0018.html>

From: Britten Kilduff (bkilduff_at_enterasys.com)

Date: 05/07/04

Date: Thu, 6 May 2004 16:58:05 CST

If you are interested in applying for the role below please send a word version of your resume to bkilduff@enterasys.com

Position Responsibilities:

Architect-level software engineer candidate for architecture, design, hands-on implementation and test with a track record of success working with complex operation system problems. Both low-level kernel expertise as well as higher level system software required. Commercial system-level product experience with embedded Linux highly desired. Candidate with team-player and senior-level leadership skills to "make-it-happen" desired.

Requirements:

Areas of expertise include: Linux/Unix/Embedded operating systems, Linux kernel, device drivers, networking, high-availability, strong software architecture (abstraction layers), IPC, distributed computing, knowledge of hardware architecture issues (processors/buses) for networking products, Expert in C programming language.

Desired Skills/Experience:

Desirable to have distributed software RAID and hitless software upgrade experience. Some assembler (PPC/X86). BA/BS in computer science.
