Hi Morgan,

JTAG, BDM, Ethernet, Serial, programmed directly to flash – many ways.

> *My view is the following, there are so many possible setups that it
> would take to much space to cover it all, but then I think there could
> be maybe one possible setup that could have been covered in detail.*

Yes, you are right. There are many different possible setups for getting code onto a target.

> *Is there some other book that covers a hardware configuration and
> explain the connections in detail? Some good website, maybe?*

When you reach this stage, it's usually specific to the actual target board, so you need to look through the doco for your particular platform.

regards,
