Dear all,

I bulided rrlod bootloder for innovator(omap1510) Board.  
After bulild when i am try to run on CCS its runing and its loading,  
but its not displaying the menu on serial console.

i am using teraterm pro for serial emulation(i tried with hyper  
terminal also) with 115200-8-0-1-0 for COM1.  
i debugged that serail console is working properly.

Can any body tell what's going wrong.

i am using binutils-2.1.2,gcc-2.95.3,glibc-2.2.3 toolchain for  
crosscompilation.

i tried with u-boot also, same thing happening, nothing coming on  
Serial terminal.

i reffered "Building Linux for the innovator Development Kit for OMAP  
Platform"(SWPA011) and all the related docs from ti.

Do we have any other method to burn the boot loader to flash.i have  
CCS-2.20 version and iam using ti XDS560 jtag.i boot host(this is not  
working for bin files flash buring )

Thanks in advance!

Thota
