Optiplex GX260, does Anyone knows if it works with Mandriva ?,
Dell.com does not list any technical data for that comp and in store they
know only that it is 1.8GHz intel with 20G hdd and 256Mb ram.

Don't knoww about Mandriva. But FWIW I've set up SUSE 10.0 on a GX 260, no
problems at all.
