I solved it after reading question 3.2 in part 2 of the FAQ(How to Access Files on a MS-DOS Partition or Floppy)(Not perfect, however. I still cannot get write access to the partition for normal users.)

Now I've got another problem: I have exported my home directory(/home/keisar) with this entry in

/etc/exports:

```
# cat /etc/exports | grep keisar  
/home/eirik 192.168.0.2(rw)
```

When I mount this directory on the client with this command:

```
# mount 192.168.0.1:/home/eirik /mnt/EIRIK -t nfs
```

Regular users cannot read the contents of the directory (ls: .: permission denied), and the root user is allowed to ls, but it shows nothing.
