I wasn't really sure where this would be topical so I cross-posted. If I'm off-topic in either, please let me know and I'll gladly move to another newsgroup.

I've read through the man pages on wget and searched Google, and I can't find a way to download files after a certain date. For example, I want to download all files after January 1, 2004 and ignore all others. Is this possible?

I appreciate any advice and thank you in advance,

Sean
