Please take note and fix! You don't acknowledge so one must assume you have not read.

> *I did say I typed "master# make xconfig"*

Noooo you didn't. You are mixing up your make xconfig with your my\_domain\_name internal.

> *then I typed "make xconfig"*

Good. But why? Are you in X? If not, what would you expect?

> *realizing, or partly realizing, that master# was the prompt.*

Why tell us about your "realized" mistake? To establish the cover that you have some intellectual issues in this domain? Feigned

helplessness won't get you anywhere. You are dealing with a machine.
